

We claim:

1. A laminate roofing tape to bridge the gap between adjacent building modules provided with roofing membranes, the tape comprising:

- 5 a tacky elastomeric adhesive layer with an underside and an oppositely facing outer face,
- a porous reinforcing layer embedded in the adhesive layer,
- a protective membrane layer permanently adhered to and covering the outer face of the adhesive layer, and
- 10 a release strip releasably adhered to and covering the underside of the adhesive layer.

2. A roofing system for buildings constructed from side-by-side modular units, the roofing system comprising:
 - roofing membrane sheets secured to the roof deck of the modular units, and
 - a laminate roofing tape adhered to adjacent edge portions of the adjacent
- 5 membrane sheets and spanning across the gap between adjacent modular units,
 - the tape including
 - a tacky elastomeric adhesive layer with an underside and an oppositely facing outer face,
 - a porous reinforcing layer embedded in the adhesive layer,
 - 10 a protective membrane layer permanently adhered to and covering the outer face of the adhesive layer, and
 - a release strip releasably adhered to and covering the underside of the adhesive layer.

3. A laminate roofing tape to bridge the gap between adjacent building modules provided with roofing membranes, the tape comprising:

 a tacky elastomeric adhesive layer with an underside and an oppositely facing outer face, the elastomeric adhesive including cross-linked polymers,

5 a porous reinforcing layer embedded in the adhesive layer,

 a protective membrane layer permanently adhered to and covering the outer face of the adhesive layer, and

 a release strip releasably adhered to and covering the underside of the adhesive layer.

4. A laminate roofing tape to bridge the gap between adjacent building modules provided with roofing membranes, the tape comprising:
 - a tacky elastomeric adhesive layer with an underside and an oppositely facing outer face,
 - 5 a porous reinforcing layer embedded in the adhesive layer, and a release strip releasably adhered to and covering the underside of the adhesive layer.
